10 ABSTRACT OF THE DISCLOSURE

09759786-011201

A user device, a first computer system, includes a lightweight component that receives user input actions for a runtime environment component that is executing on a second computer system. The lightweight component sends a remote input action command to a user interface infrastructure that is executing on the second computer system. In response to the remote input action command, the user interface infrastructure sends a local input action command to the runtime environment component that processes the command, and issues a local output command to the user interface infrastructure that in turn sends a remote output command to the lightweight component on the user device. In response to the remote output command, the lightweight component causes an output on the user device.
